Overview

Airport Manager FIDS is a user-friendly flight Information Display Systems based on the HTML technology. It can be delivered with our other optional airport software such as Aeronautical Billing and Reporting, Local-DCS and Cupp-T Common use platform.

Key benefits

- Improves passenger service with accurate flight information
- Displays multi-lingual flight information
- Provides flight information on airport web site
- Makes easy the system management by using the supervision functions
- Reduce the energy cost by using automatically turn-off and turn-on functions.

Key Features

- Flight schedule management.
- Display system management
 - Area configuration tool.
 - Allocation tool displays in different areas
 - Multi-media file management (videos, pictures, flash animations)
 - Scrolling text and html editor
- Customization functions
 - Airline check-in, boarding and baggage pages
 - Animation pages
- Flight information control panel
 - On-time, delayed, cancelled and other flight status
 - Arrival informations such as baggage belt
 - Departure informations such as check-in desks, gate, etc.
- Individual monitor control panel
 - Sleeping mode
 - Baggage, check-in, boarding informations.
 - Arrival and Departure list
 - Sequence mode
 - Multi-media functions

Flight Management

- Seasonal flight schedule
- Daily expected flight lists
- Display all updates in real-time

Display functions

- Domestic and International flight lists
- Dispatched flight lists by area
- Airline customized pages
- Multimedia animations
- Web-connected; export html and xml files to be displayed in real-time on airport web-site

System management

- Create areas and dispatch monitors.
- Design yourself pages in HTML format with any standard market software.
- FIDS supervision; monitoring of all displays from any administrator work station

Airport areas designed by yourself are automatically shown in the vertical-tab.
